

TECHNOLOGY OVERVIEW

by

devastating capability, revolutionary advantage

IntroVirt® is an **Introspective Hypervisor and Toolstack** that provides real-time, event based monitoring and analysis of Virtual Machines (VMs)

A complete view...

...from a specific process to the operating system, IntroVirt® provides the ability to monitor and manipulate the critical resources of a virtual machine, including but not limited to file, network, registry, driver and memory

Advantage, IntroVirt®

- Non-invasive collection and analysis without guest cooperation
- Low overhead, context-based enabling and disabling of event interception
- Enforce policy, manipulate the environment and terminate a process
- Examine core Windows® data structures
- Trace Windows® system calls, system call returns and arguments

MORE data, MORE control, BETTER results

Proven Application Areas:

- *Cyber asset protection*
- *Malware analysis*
- *Reverse engineering*
- *Dynamic application analysis*
- *Dynamic forensic analysis*
- *Training & simulation*
- *Experimentation & instrumentation*
- *Cloud security*

POWERFUL control and manipulation of virtualized environments

FLEXIBLE to adapt to diverse virtualization applications

CAPABILITY to collect and monitor non-invasively
